

A large-scale industrial facility, likely an oil refinery or chemical plant, is shown under a hazy, overcast sky. Several tall smokestacks are visible in the background, each emitting a thick plume of white smoke that rises into the air. The foreground and middle ground are filled with a dense network of complex piping, metal walkways, and structural steel frameworks. The overall scene conveys a sense of large-scale industrial operations.

# FIRE PROTECTION

Our team has a proven track record in hydrocarbon fire protection on oil & gas.

## REFRACTORY

- **Client:** NCOC
- **Contractor:** PSNK
- **Project:** 14018 - SRU Boiler Refractory project under the PSNK Improve project activities

A variety of fire protection services are available including fire seals and general penetration work utilising a variety of industry standard materials and specifications.

We are licensed for the Promat Fendolite, International Chartek, PPG Pitt- Char, Leigh's M90 Systems, and Jota-Char.

**DSL Caspian** applies refractory linings to all types of furnaces, kilns, incinerators and heating plant, in all major industries. Our highly skilled craftsmen are experienced in working with all types of materials, including bricklaying, gunning, casting, ramming, hand packing, pumping and applying fibrous products in slab, blanket and modular forms.

**DSL Refractory team** worked 24/7 on the SRU Boilers on Tranche's 1&2 with the assistance and guidance of the Gouda reps.

They were able to complete the refurbishment of both boilers with installation of the ceramic paper, ferrules blocks & cement works in both boilers. With the complexities of working confined space and the natural hazards associated with this type of work the workforce carried this out with a safe and professional attitude ensuring the task was completed in a timely manner.
