

A large-scale industrial construction project is shown under a cloudy sky. On the left, a multi-story structure is completely encased in a complex network of metal scaffolding. In the center-right, a yellow and black Komatsu wheel loader is parked on a dirt path. The loader has '103 LAB' and 'KOMATSU' markings. In the background, more industrial buildings and piping are visible. A small fire is burning within the scaffolding on the left side of the image.

FIRE PROTECTION

Our team has a proven track record in
hydrocarbon fire protection on oil & gas

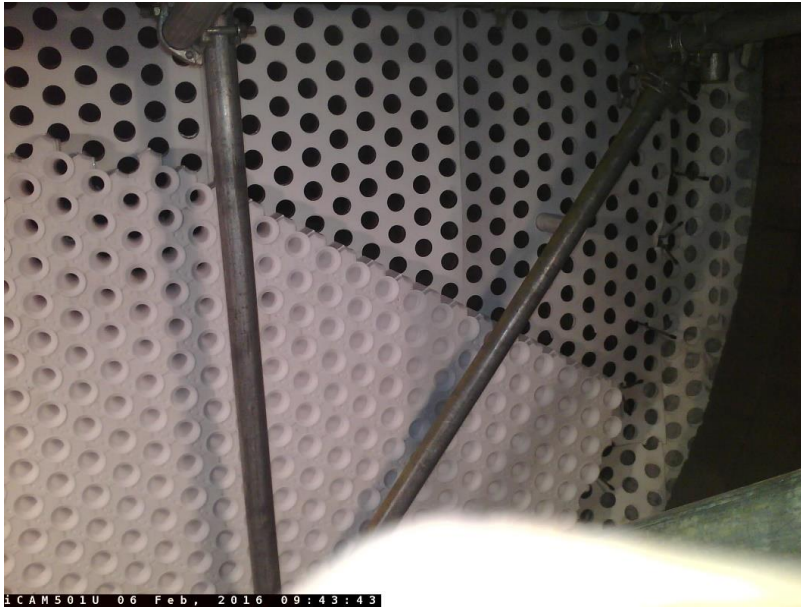

INDUSTRIAL SERVICES FROM YOUR LOCAL PARTNER

A variety of fire protection services are available including fire seals and general penetration work utilising a variety of industry standard materials and specifications. We are licensed for the Promat Fendolite, International Chartek, PPG Pitt-Char, Leigh's M90 Systems, and Jota-Char.

DSL Caspian applies refractory linings to all types of furnaces, kilns, incinerators and heating plant, in all major industries.

Our highly skilled craftsmen are experienced in working with all types of materials, including bricklaying, gunning, casting, ramming, hand packing, pumping and applying fibrous products in slab, blanket and modular forms.

DSL Refractory team who worked 24/7 on the SRU Boilers on Tranche's 1 & 2 with the assistance and guidance of the Gouda reps. They were able to complete the refurbishment of both boilers with installation of the ceramic paper, ferrules blocks & cement works in both boilers. With the complexities of working confined space and the natural hazards associated with this type of work the workforce carried this out with a safe and professional attitude ensuring the task was completed in a timely manner.
